since July'14- till now

Zenga Media
Software Engineer

since Jun'13- Jul'14

Key Roles:

- » Occupied with the development and support programme for different projects to modify the changes as per requirement.
- » Develop moderately complex software applications in Java, NodeJS, Shell in accordance with applicable software development methodology and release processes.
- » Managing complete application with flow and architecture patterns to provide best possible solution.
- » Estimate level of effort, evaluate new options of similar technology and offer suggestions to improve processes.
- » Review product and application information including manuals and brochures for technical accuracy.

PROJECTS UNDERTAKEN

Logistics - Web Application

Jan'15 - till now

Technology: Java 1.8, Spring, Hibernate

Description: The objective of this project was to maintain data of packages sent by customer from one of its location to another, but here package is not a package it's a container as we are talking about the large consignments that are transferred from one place to another.

Aviation – Revenue Management System

Nov'14 - Jun'15

Technology: Java 1.7, Spring, Hibernate, JSPX, Oracle Developer 11g, NodeJS

Description: The primary objective of this application is to manage the revenue model, where based on some algorithms client was suggested to keep prices for their flights to generate maximum revenue out of the flight. Here some of the concerns were availability of seats, season of flight, competitor's price list, etc.

Rating & Review System –Web Services

Jul'14 – Dec'14

Technology: Java 1.7, Spring, Hibernate, MongoDB, Jersey API

Description: The project focused on rating and review procedure for a very famous ecommerce product, where we were asked to maintain a record of rating and reviews from users for a particular item and also calculate average rating based on the number of total ratings. Also for reviews a profaner was introduced which was a separate tool to detect the tone of the comment and to eliminate any profane words from the review.

Media – Content Management System

Oct'13 – Jul'14

Technology: Java 1.7, Spring, Hibernate, MySql, Shell Scripting, Python

Description: This was a CMS (Content Management System) with main purpose of handling the content in all platform for certain applications. Also this was one of my suggestions that later turned into a product of the company. In this content like images and videos were added by the CM team and thus updating the content in all the platforms of the application. Any new application (built on a certain architecture) can be added to this CMS with minimal configuration for managing its content.

Media – Web Application

Jun'13 - Oct'13

Technology: Java 1.6, J2EE, Servlets, MySql, Shell Scripting

Description: This web application was the main product of my company. This was an online TV application, where users were entertained with certain channels and movies without any subscription. My main role in this included developing social integration and user profile management for the web platform.

EDUCATION

Year	Course	University	%
2013	B.Tech (Computer Sc. Engineering)	Rajasthan Technical University	68
